Installing License Key

Configuration · https://2yetis.net/docs/installing-license-key/

Uvuyo needs a license key to run. If you don’t have a license key, uvuyo will run with a temporary license after install. The temporary license key is valid for 30 days. You will need a permanent license key to run uvuyo after the temporary license key expired. Contact 2yetis sales if you don't have a license key and would like to use the product after the temporary license key expired.

Be aware that you are not allowed to run uvuyo in production with a temporary license key. Also you are not allowed to reinstall uvuyo after your temporary license has expired.

You install the license key in the `$UVUYO_HOME/etc/default.properties` file. There you need to set the two parameter `uvuyo.license.owner` and `uvuyo.license.key` to the values you got when you retrieved the license from 2yetis. The $UVUYO_HOME directory is the directory in which you have installed uvuyo. This is typically /opt/2yetis/uvuyo on linux systems and c:\Programm Files\uvuyo on Windows systems.

Note
If the file does not exists you would need to create the file.

Parameters:

Parameter	Description
uvuyo.license.owner	The entity that owns the license. Make sure that you type the owner exactly how you got it from 2yetis, else the node is not going to start.
uvuyo.license.key	The license key provided by 2yetis. Again ensure that you have no typos in the key, else the node is not going to start.

Example:

```
uvuyo.license.key=3de8-cb9d-d74a-1cd0-4105-6682-35cf-ed17-0813-cc91-4910
uvuyo.license.owner=MyCompany
```

The license file is validated during startup of the product. If you do not have a valid license key, the product will not start you are will get an error message in the uvuyo log file.
