Running the Installer

Installation · https://2yetis.net/docs/running-the-installer/

After downloading and unzipping the installer you should have uvuyo-install.jar file. You can start the installer using the following command:

```
java -jar uvuyo-install.jar —-uvuyo.home=/opt/2yetis/uvuyo \
config=test
```

Make sure that the home directory is specified as a fully qualified path. If you do not specify this value, it will default to /opt/2yetis/uvuyo.
